

APEX

APEX — Platform Foundation overview

The unified data fabric, shared risk engine, entity resolution, and governed orchestration every EternaEdge product stands on.

WHAT'S INSIDE

- The foundation model: one platform, five product pillars, one assistant layer
- Unified data fabric — one canonical intelligence schema across every domain
- Shared risk engine — intent and targeting scored across all domains at once
- Entity resolution — one entity, one intelligence picture; duplicate alerts collapse
- Automated orchestration with human-in-the-loop controls
- Governance, auditability, and the human role

WHO IT'S FOR

For platform architects and technical evaluators assessing how EternaEdge integrates at the data and identity level.
