OBSIDIAN

OBSIDIAN — Counterintelligence overview

Designed to detect foreign targeting, insider threats, and vetting risk during the adversary's reconnaissance phase.

WHAT'S INSIDE

- The protective shield: early warning during reconnaissance, before compromise
- Guard — behavioral baselines with cross-domain anomaly correlation
- Shield — mapping what you protect to who wants it; targeting early warning
- Check — beneficial ownership, sanctions, PEP, and adverse-media screening with FOCI indicators
- Alignment with NISPOM- and CMMC-aligned compliance and continuous-evaluation programs
- The human role: automation surfaces, analysts adjudicate

WHO IT'S FOR

For CI teams, program protection offices, insider threat hubs, and security leadership.
