

PLATFORM BRIEFING

Detect intent, not just events.

EternaEdge is the autonomous intelligence operating system that protects an organization's people, technologies, and knowledge — surfacing the adversary's targeting and preparation before compromise occurs.

THE PROBLEM

Five tools, five versions of the truth.

- Fragmented tools, each with its own data model
- Duplicate alerts for the same underlying event
- Manual correlation by analysts across systems
- The pattern only becomes visible in hindsight

THE PROMISE

One governed platform, humans in the loop.

- Monitors, analyzes, and orchestrates around the clock
- Designed to detect intent, not just events
- People hold authority over every consequential step

THE ARCHITECTURE

One foundation. Five pillars. One assistant layer.

- APEX — the platform foundation everything stands on
- OBSIDIAN, LUCID, FORGE, STRATUM, PATHWAY — the product pillars
- AI FORCE — Sentinel, Oracle, Scribe, Guide across every module

HOW IT WORKS

One signal, seen by everything.

- A signal arrives in any domain and is normalized to one schema
- It resolves to the entities it concerns — one entity, one picture
- The shared risk engine scores it against every other domain
- Orchestration acts, with human-in-the-loop controls

GOVERNANCE

Autonomy you can defend.

- Human-in-the-loop controls on consequential steps
- A complete audit trail: what ran, what it touched, who approved
- AI assistants operate within APEX, using governed, auditable data — they do not bypass authority, workflows, or oversight
